User Guide

Guest Kiosk

To access the guest portal for requesting documents, type <hostname>/portal in the browser's address bar.

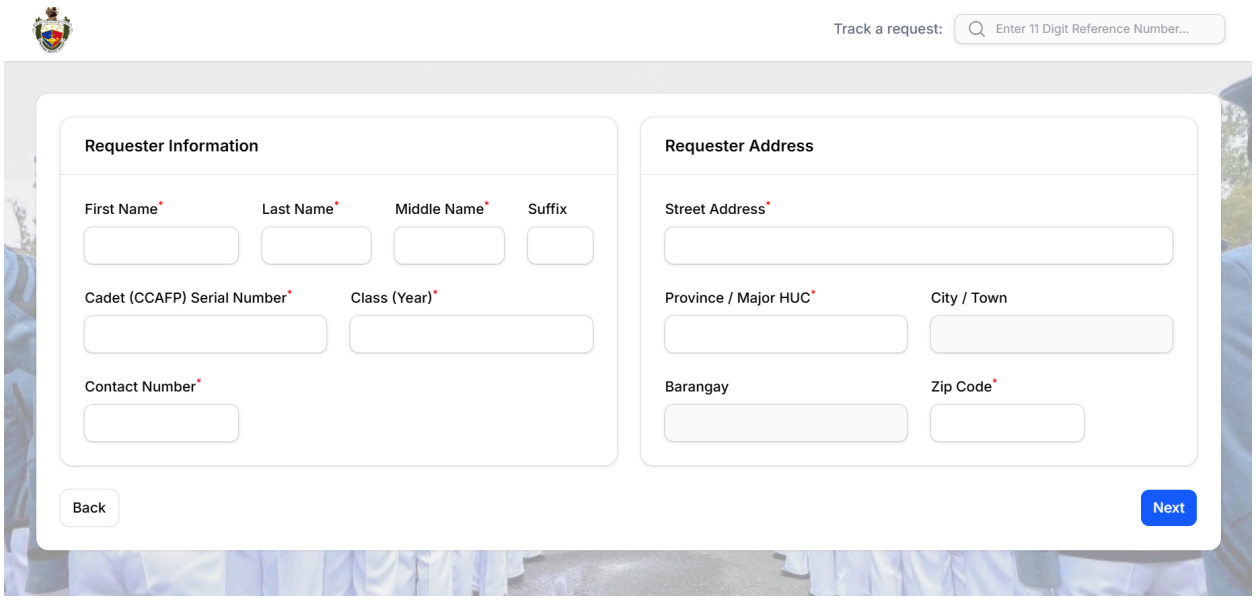

Functionalities:

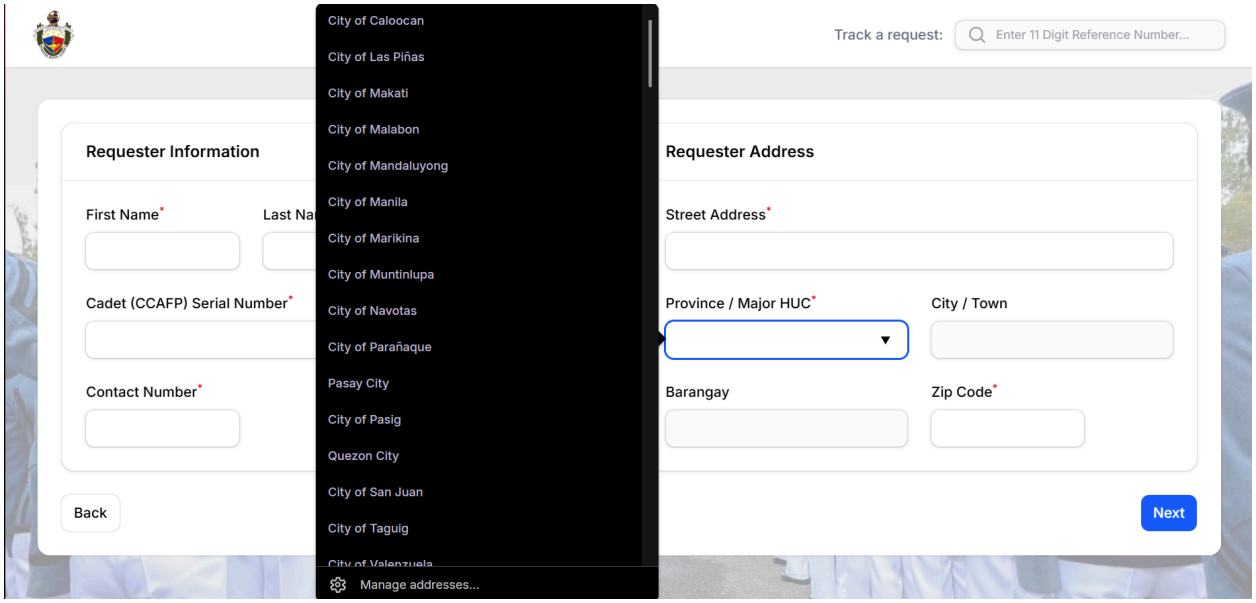

1. Request Tracker - Allows users to track their requests using the reference number provided at the end of the transaction. Users may view their requests by typing the reference number on the search bar and pressing the ENTER key.

2. Request Form - Allows users to request for a document using a form. Users may start the form by clicking on the next button.

Document Request Form

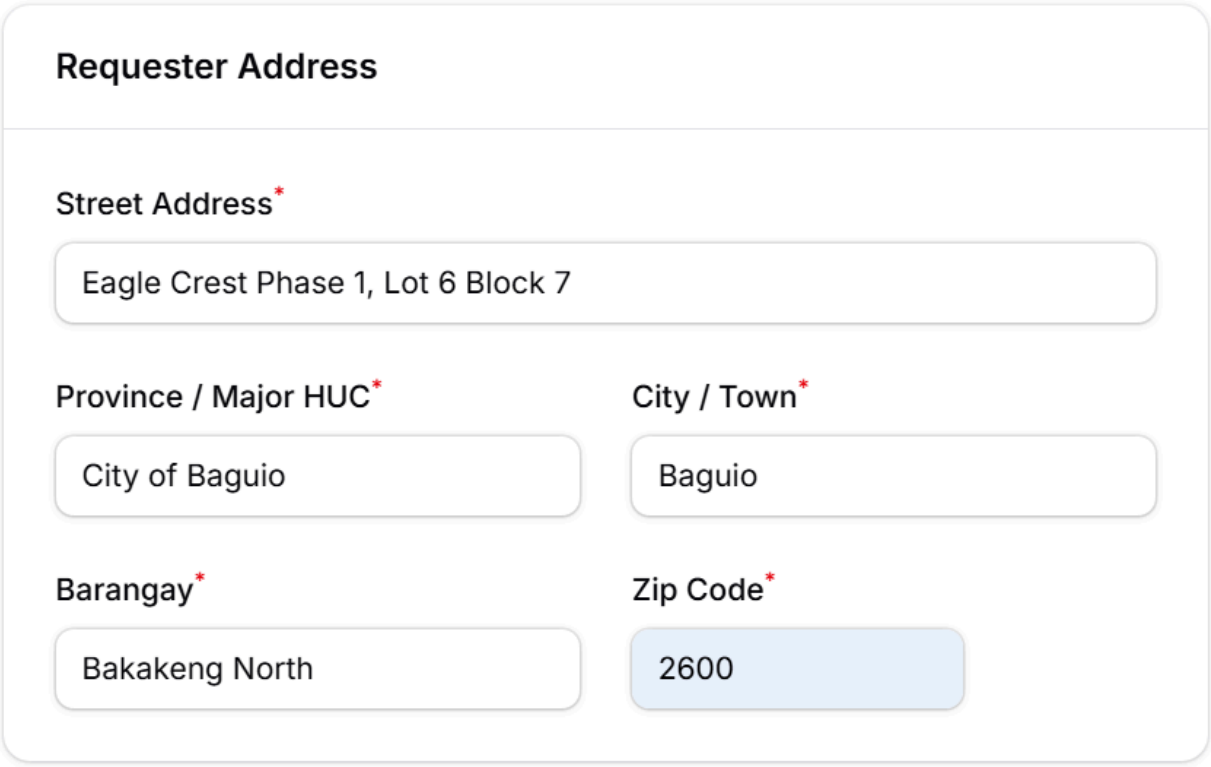

When filling up the Province / Major HUC, City / Town, and Barangay, a user may pick a location from the suggestions or type their own (in case their address does not exist).

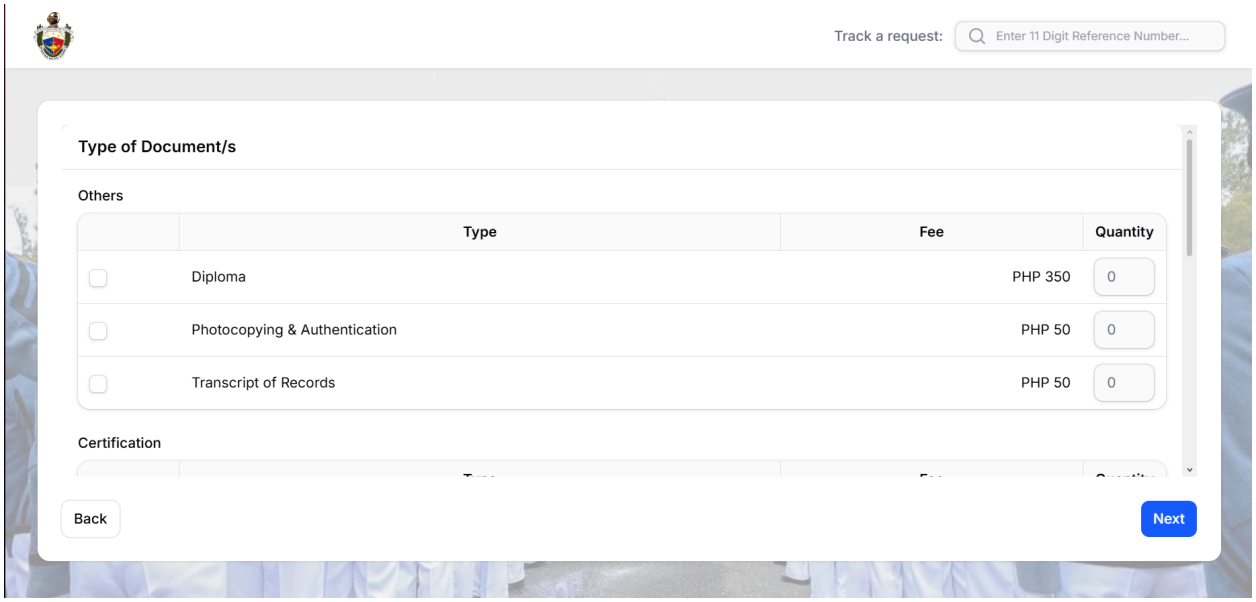

Fill out each address field completely and accurately. Note that Province / Major HUC combines provinces and Highly Urbanized Cities (like Baguio City).

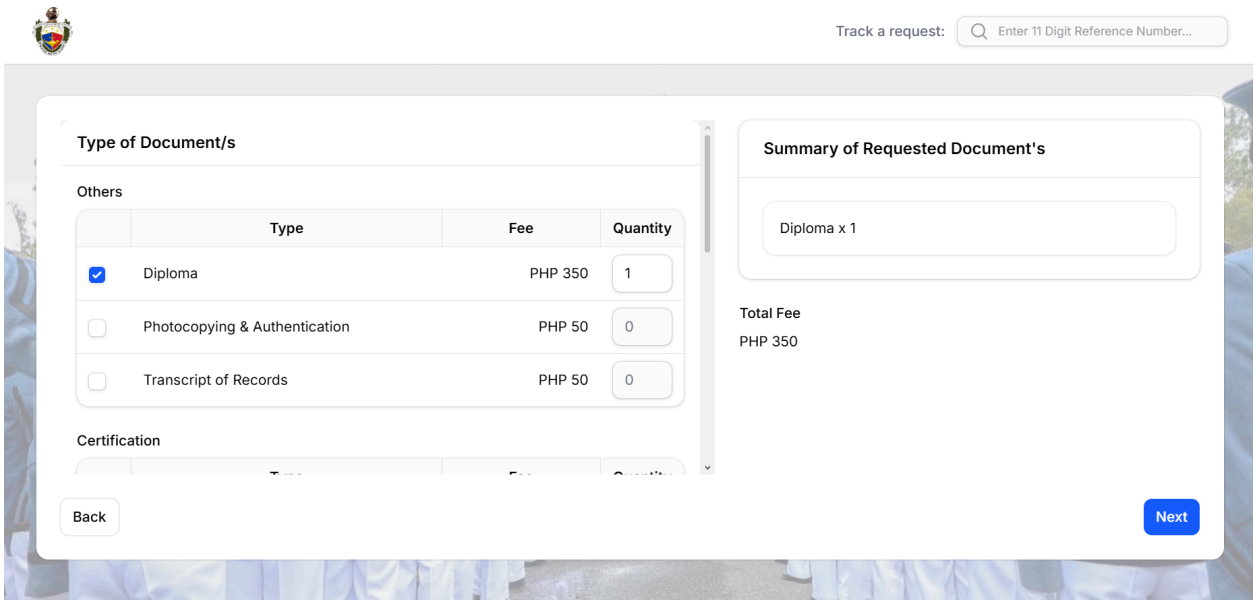

Example for Bakakeng Norte, Baguio City:

- Province / Major HUC: City of Baguio
- City / Municipality: Baguio
- Barangay: Bakakeng Norte

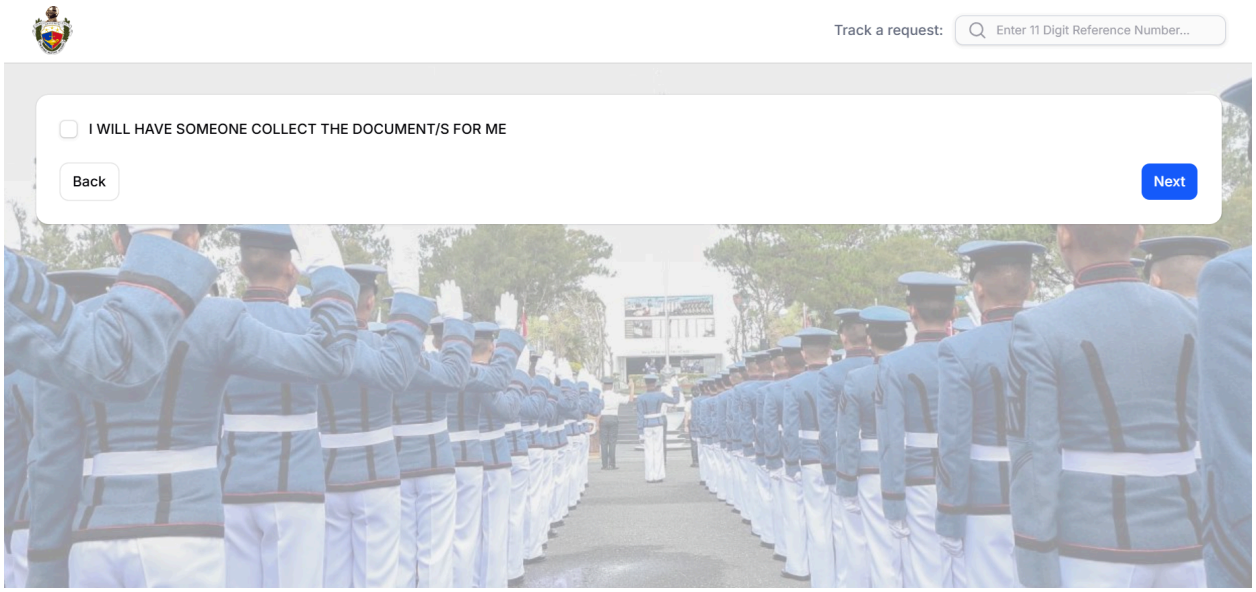

After clicking next, user's will be asked to pick the document/s they would like to request for.

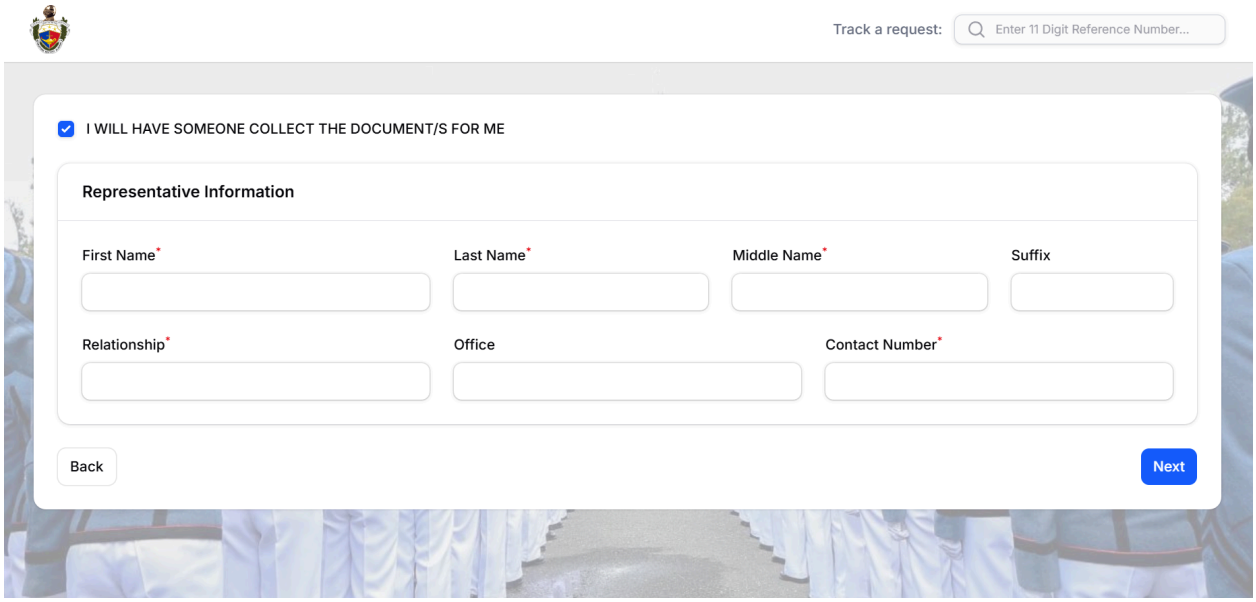

Clicking on the box to the left of the document would allow you to input the amount of copies you would like to receive. To the right, you would be able to see the document/s you have selected including the total payment.

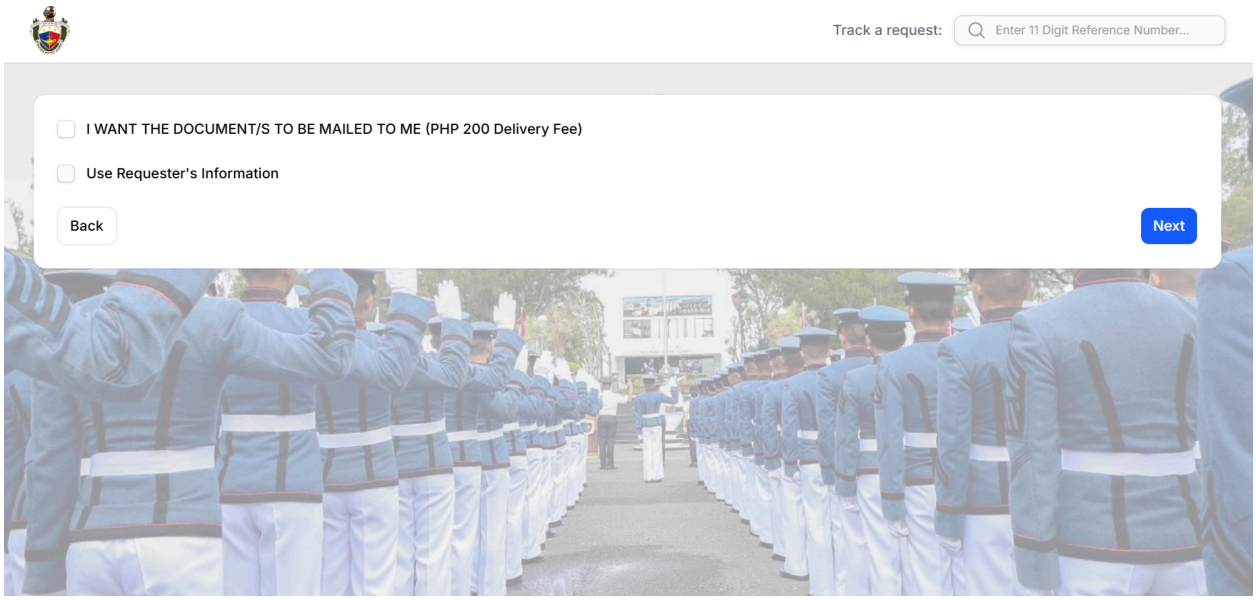

After clicking next, you will be asked if you would have a representative collect your documents. Otherwise, you may skip this part and click next.

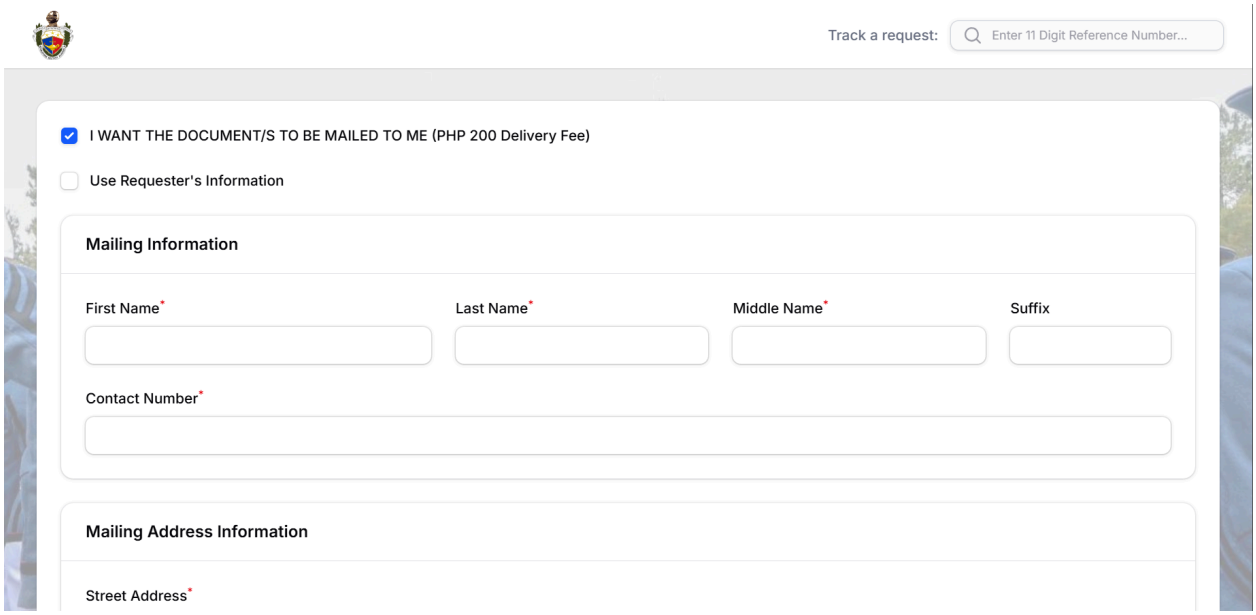

Otherwise, clicking the box would make them provide the details of their representative.

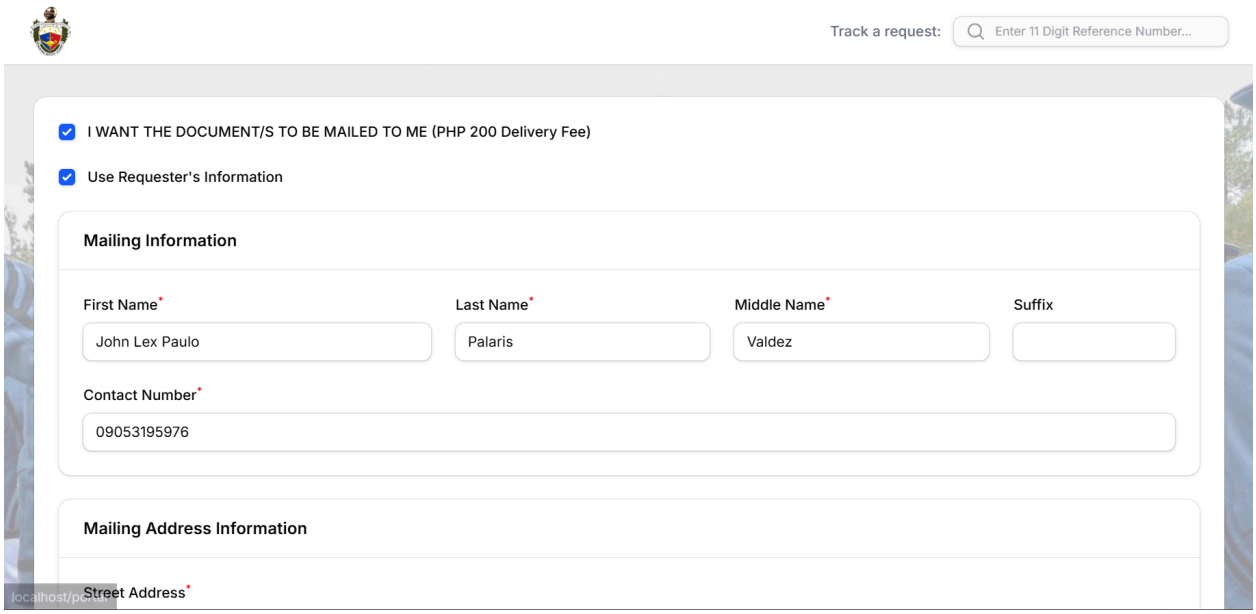

After clicking next, you would be presented with a similar option if you would like to receive the documents for delivery, otherwise, they may click the next button.

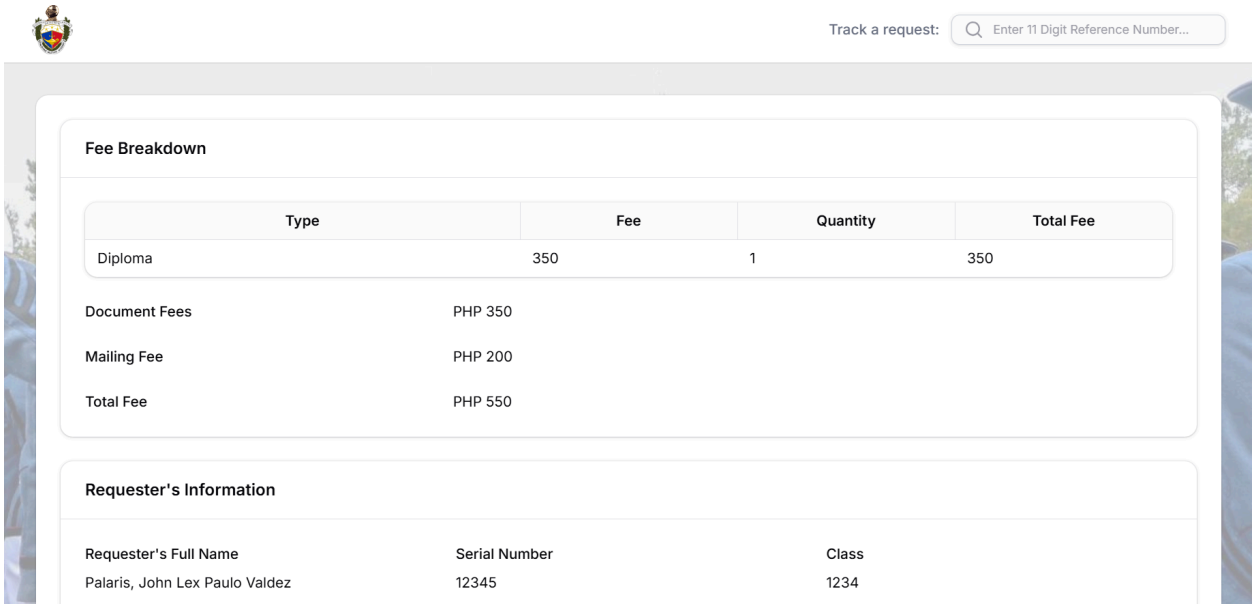

Clicking the first checkbox will require you to provide their delivery information. Additionally, clicking the Use Requester's Information checkbox would automatically fill the form with the information provided previously.

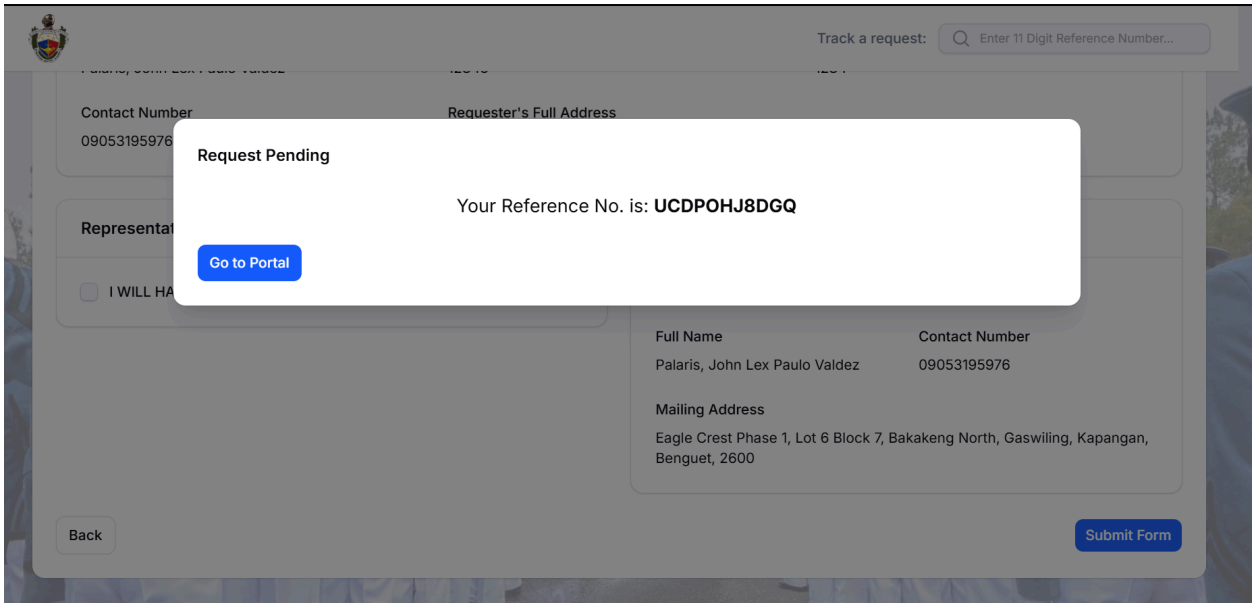

After clicking the next button, a summary page will appear. Review the information before clicking the submit button.

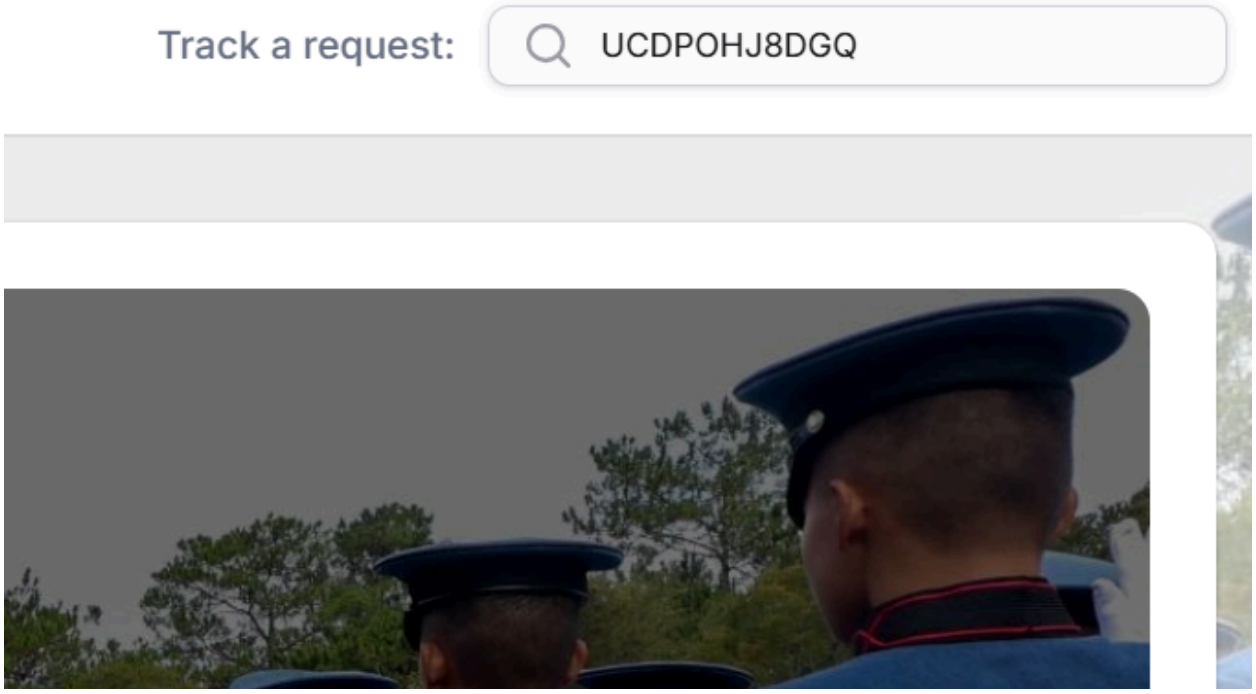

Once the form has been submitted, you will be presented with a reference number. Ensure that you remember the reference number, as it will be used to track your request on the guest kiosk. In the case that you forget it, a processor or administrator can view your request if you are able to provide your serial number/name and the date you made the request.

Track a request:
Enter 11 Digit Reference Number...
Contact Number
09053195976
Requester's Full Address
Request Pending
Your Reference No. is: UCDPOHJ8DGQ
Go to Portal
Full Name

Contact Number
09053195976
Mailing Address
Eagle Crest Phase 1, Lot 6 Block 7, Bakakeng North, Gaswiling, Kapangan, Benguet, 2600
Back
Submit Form

Request Tracker

In order to track an existing request, you must provide an 11 digit Reference Number, which will be given after submitting one. For example, if you would like to view the request that was previously made, you may do so by typing the reference number in the search bar at the top right of the website and then pressing the ENTER key.

Additional Features

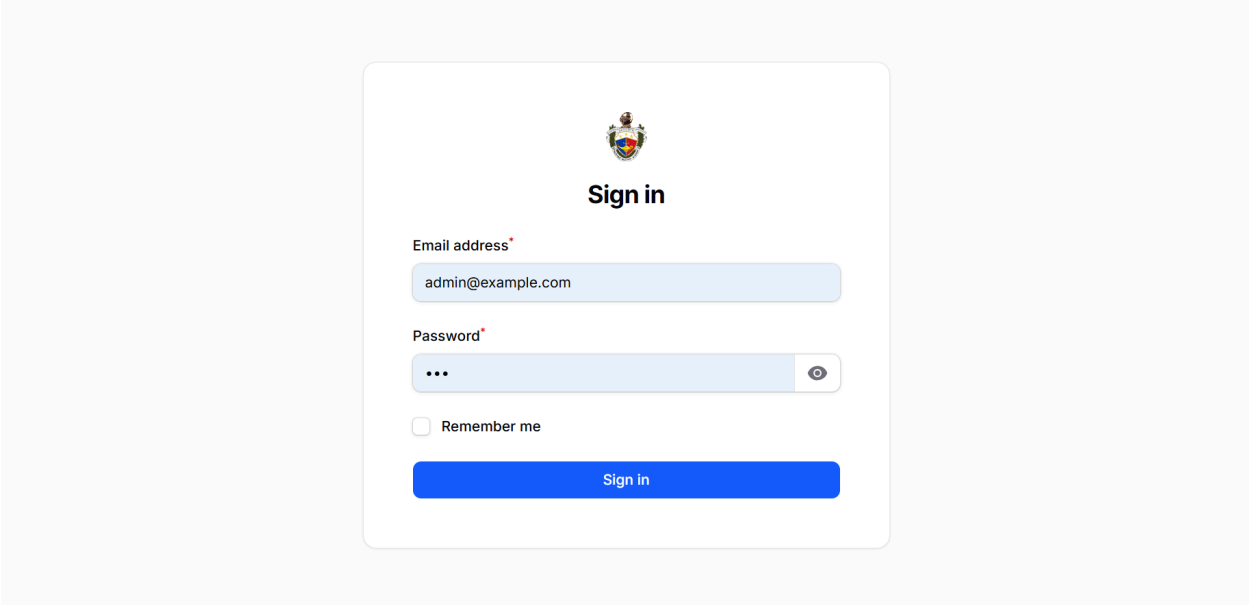

Timeout

After a few minutes (3 minutes by default), you will be shown an “idle” screen. Essentially, if the website detects that you have not moved after a set amount of time, you will be asked if you would like to continue your transaction. If you do not click the “Continue Request” button after a set time (30 seconds by default), then the website will reset and bring you back to the beginning. This is designed to protect your privacy in case the kiosk is left unattended.

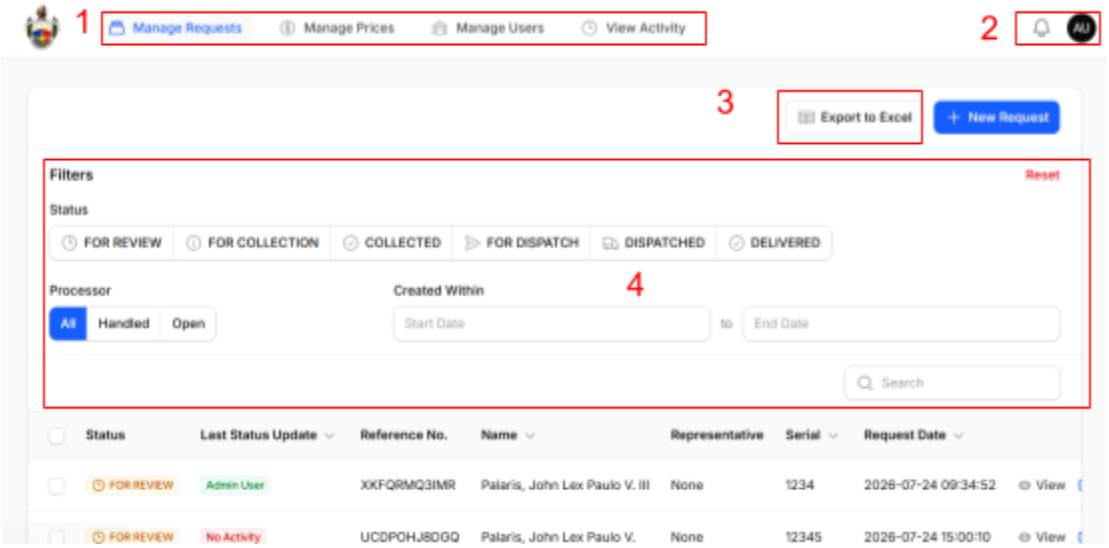

Processor Portal

To access the processor portal for managing requests, type <hostname>/processor in the browser's address bar. If you are not logged in or this is your first time using the website, you will be presented with a login screen.

Depending on the account provided, you will either be moved to the admin or processor portal.

Administrator & Processor

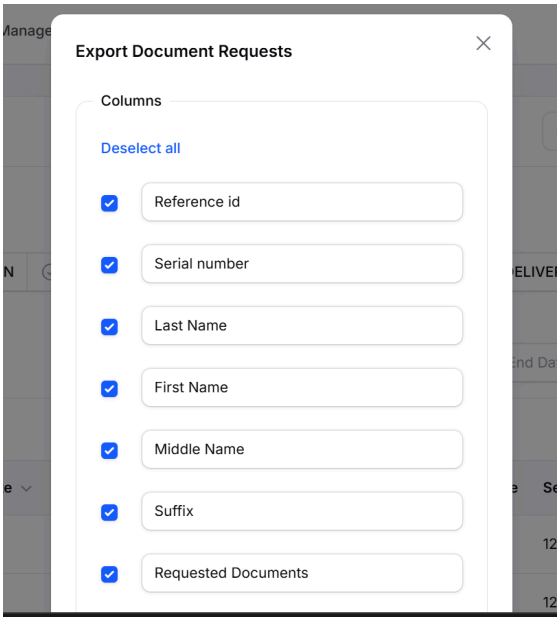

The following are features an “administrator” account can access:

1. Navigation Bar - Allows you to navigate between tabs to configure the documents that can be requested, to add, remove or edit users, and to view a log of activities (NOTE: The Navigation Bar is not included with a processor account).

2. Notification and Log Out Button - Allows you to view notifications (which will be used for report generation) and to log your account out if you are using a public pc to access this portal.

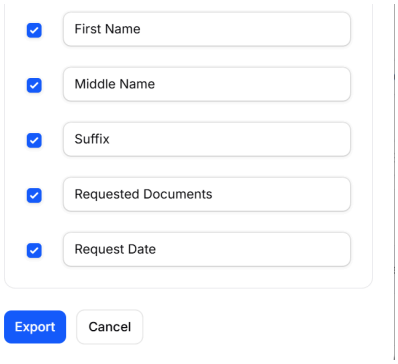

3. Export to Excel - Allows you to generate a report in an excel spreadsheet format.
   NOTE: *The report will only contain requests based on your filters. Not selecting any filter will result in the report showing all the requests that have been made through the system. For example, if you only filter for requests made during July 4, 2026 - July 10, 2026, only requests made during that date will appear on the report.*

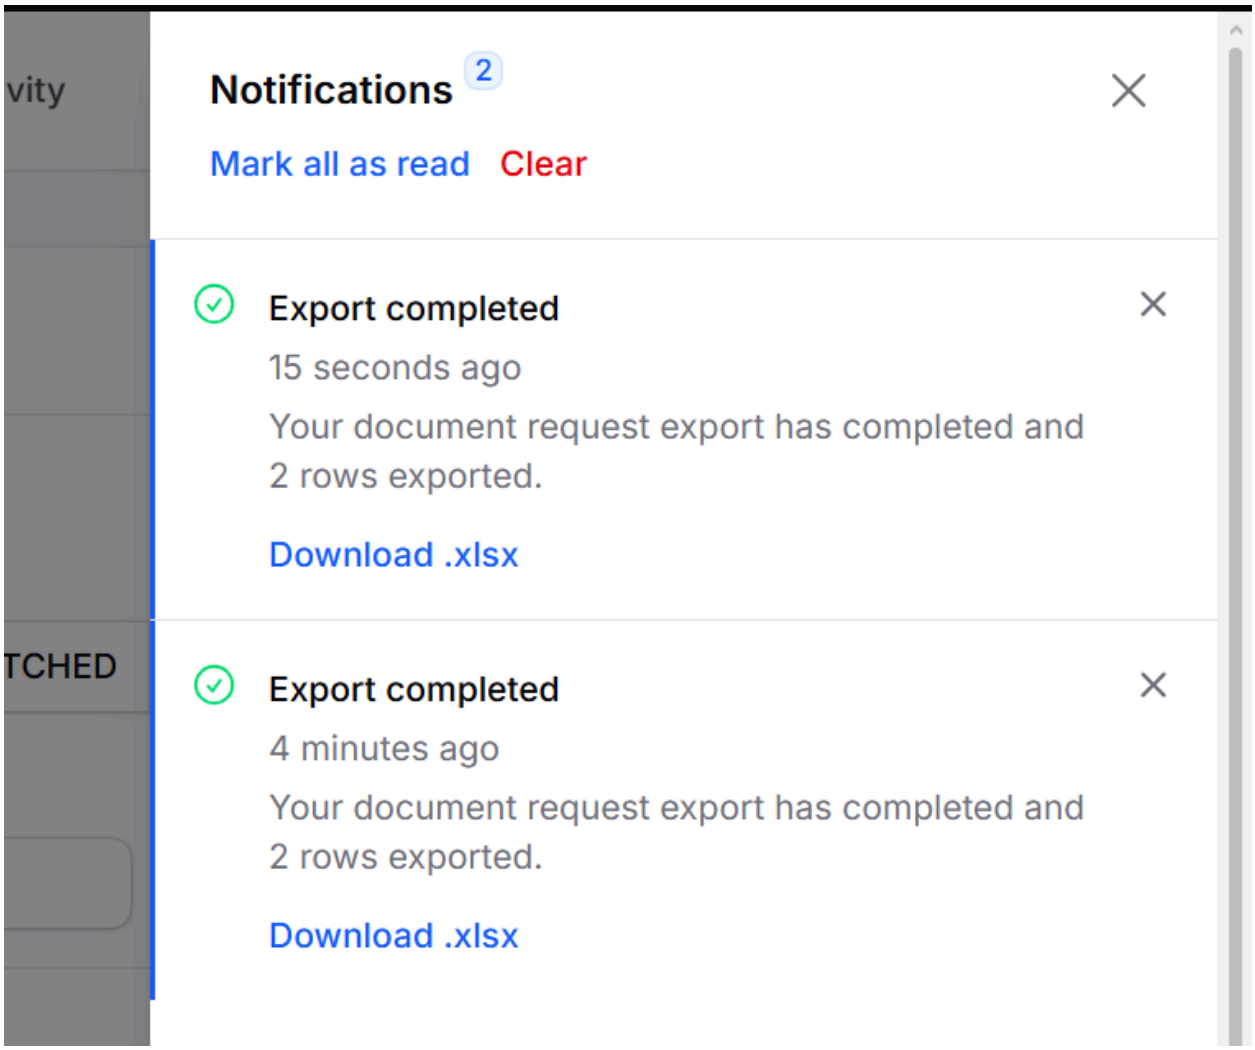

You may select which information to omit from the report by unchecking the checkbox beside the name of the header. By default, the following data will be presented as headers in the excel spreadsheet:

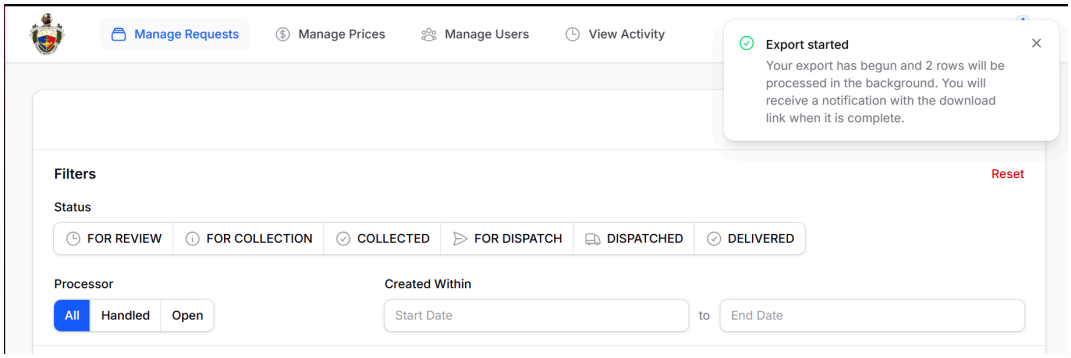

- Reference Number
- Serial Number
- Last Name
- First Name
- Middle Name
- Suffix
- Requested Documents (Including the total fee to pay per document)
- Request Date

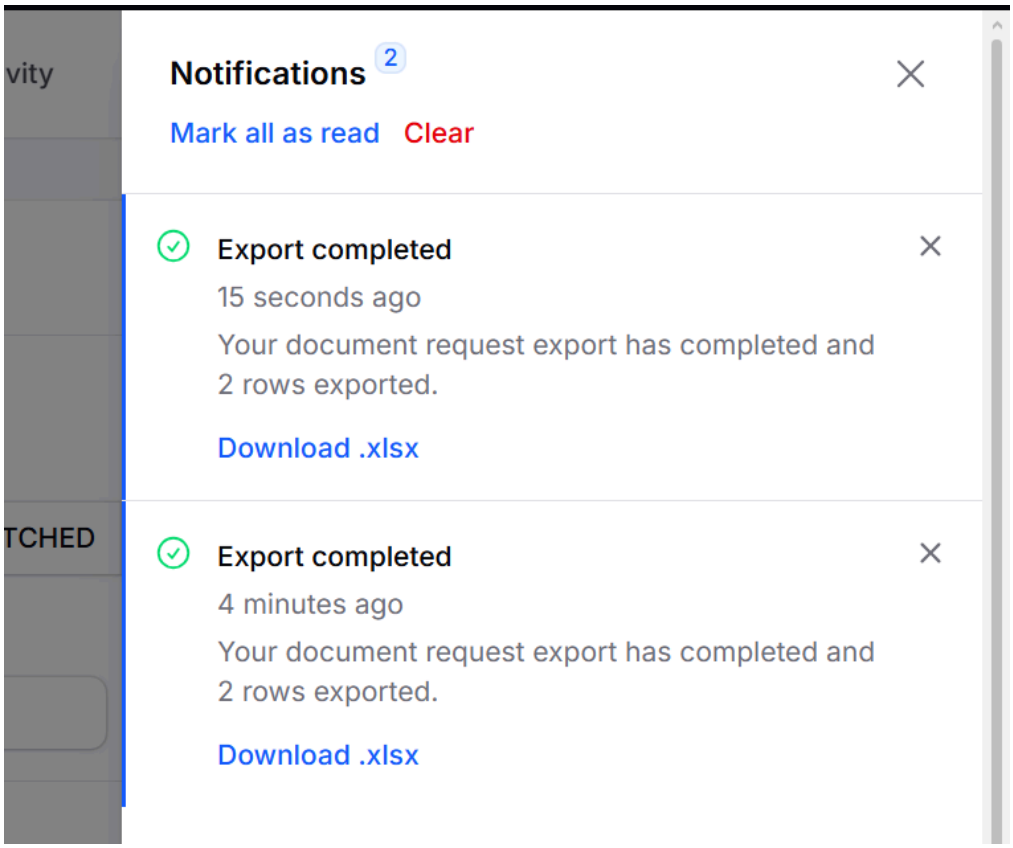

To generate the report, scroll down and click the export button.

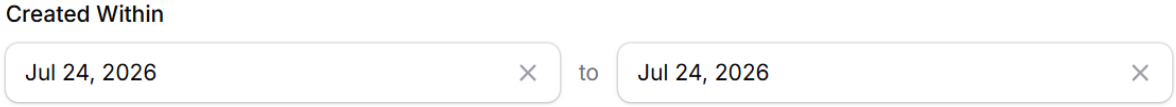

Once the report has been generated, you will be notified. Click the bell icon to view the notification and click Download .xlsx.

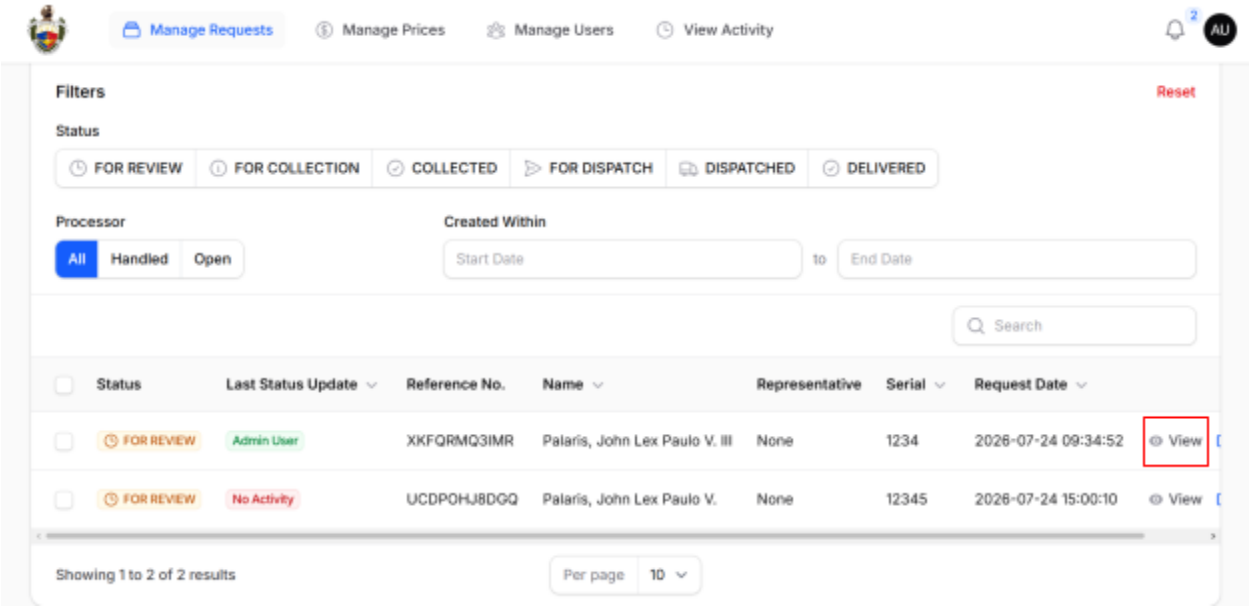

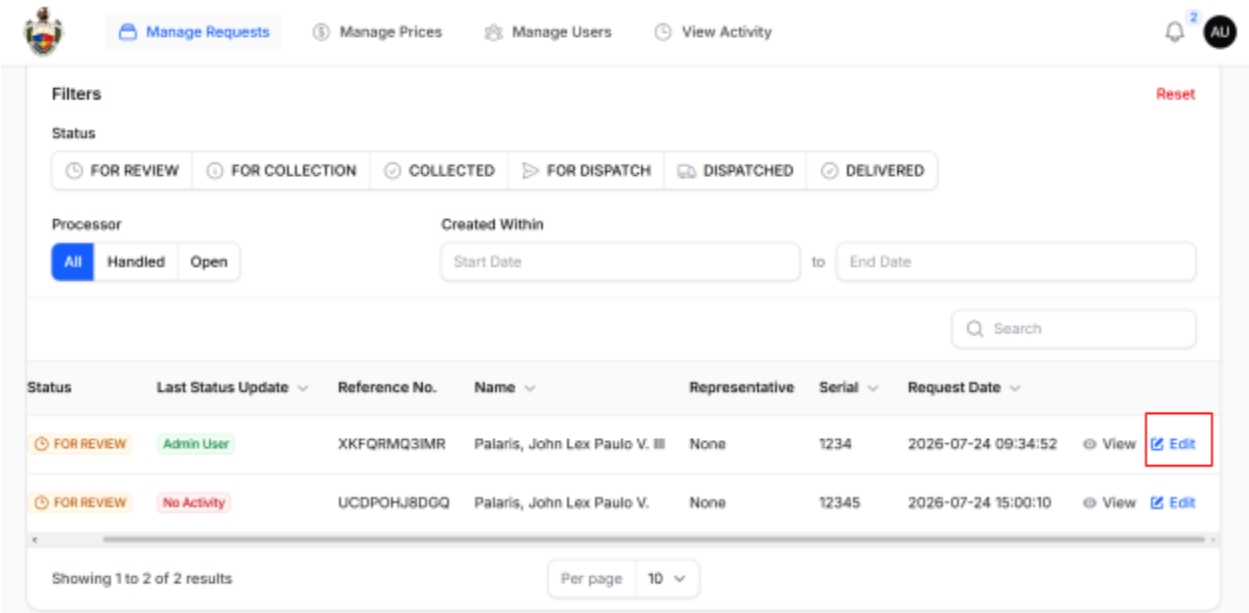

4. Filters - Allow you to filter out requests based on their status, request date, and if another user has updated the status. You may combine these filters in any way you like, for example, you may filter records with a FOR REVIEW status that are NOT OPEN made during July 8, 2026 - July 9, 2026. If you would like to filter for requests made in a single day, you can select the same start and end date in the created at filter.

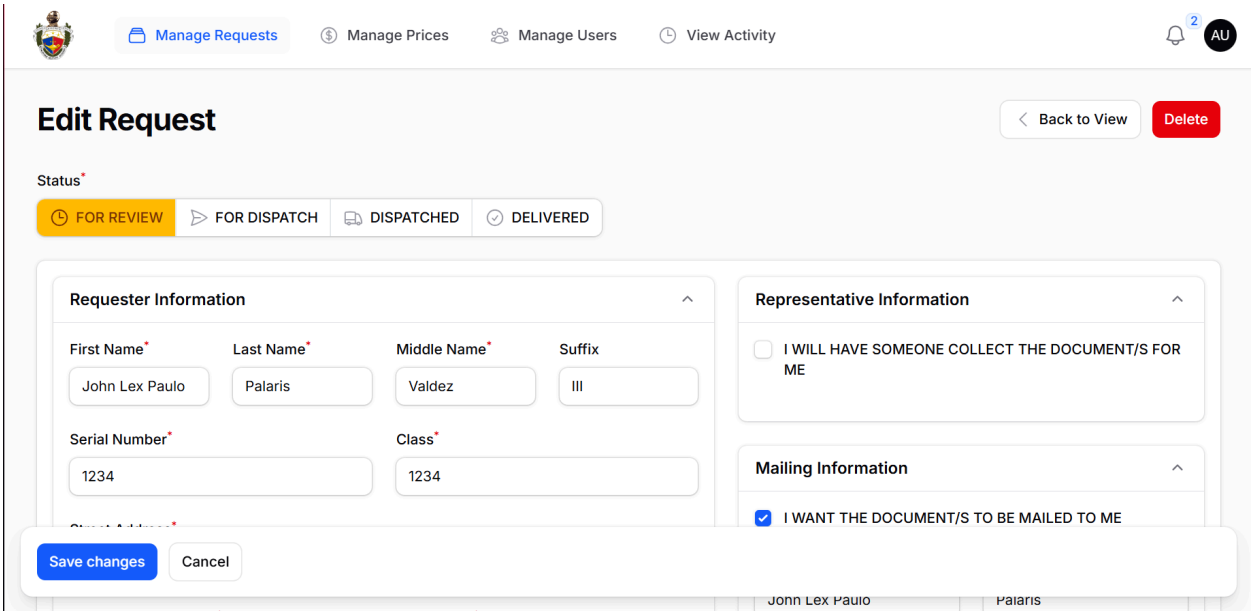

Editing Status/Requester Information

To edit a request's status or information, click the view button to view it before editing, or click the edit button to immediately edit the row you would like to edit.

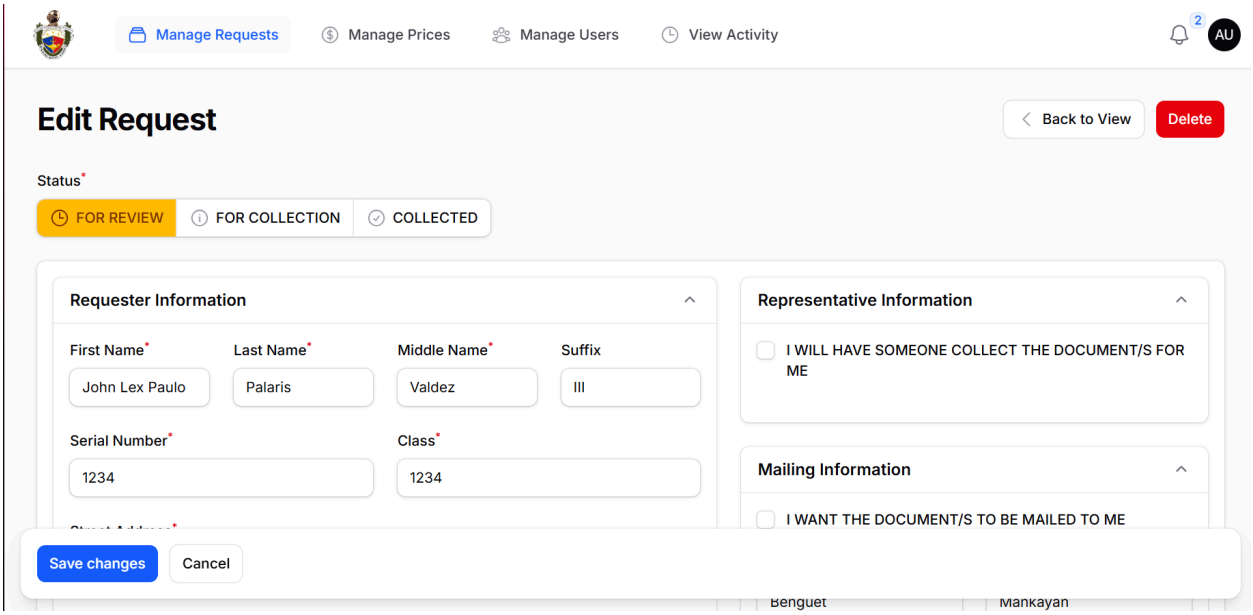

Once on the edit screen, you can update the status or other information regarding the request.

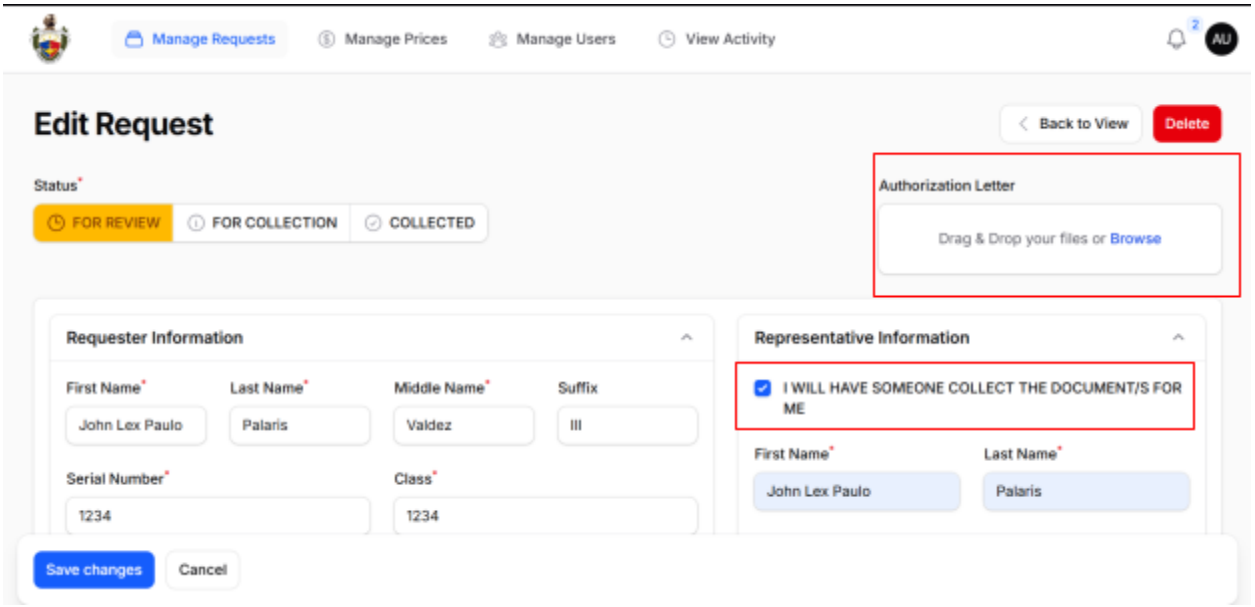

Switching from Delivery to Self Collection

Notice that on the status bar, it says FOR DISPATCH, DISPATCHED, and DELIVERED. If you would like to turn this into FOR COLLECTION and SELF COLLECTION, uncheck the I WANT THE DOCUMENT/S TO BE MAILED TO BE checkbox.

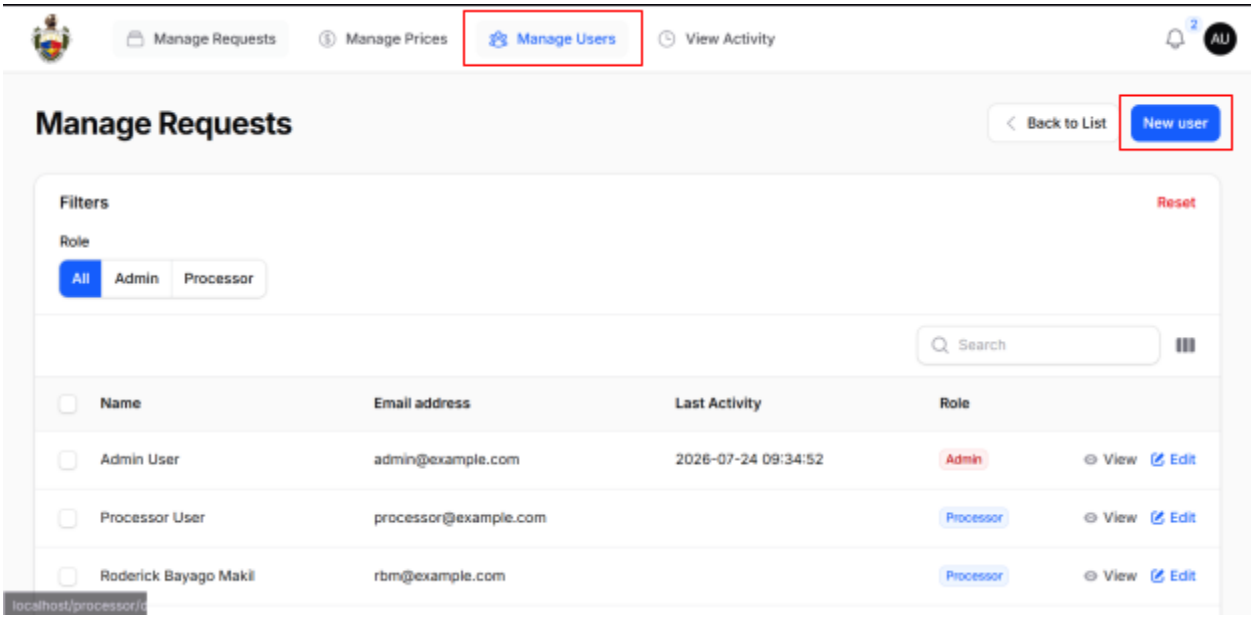

Uploading an Authorization Letter

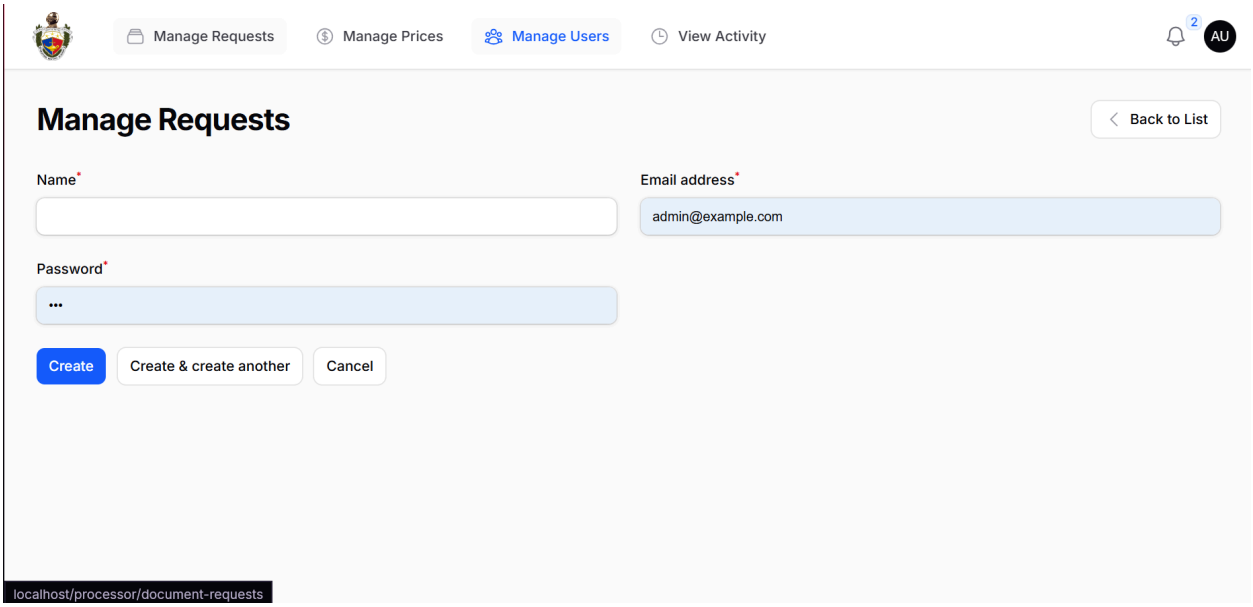

To upload an authorization letter, click the I WILL HAVE SOMEONE COLLECT THE DOCUMENT/S FOR ME checkbox, which will show the authorization letter upload box on the top right of the screen.

Adding Users

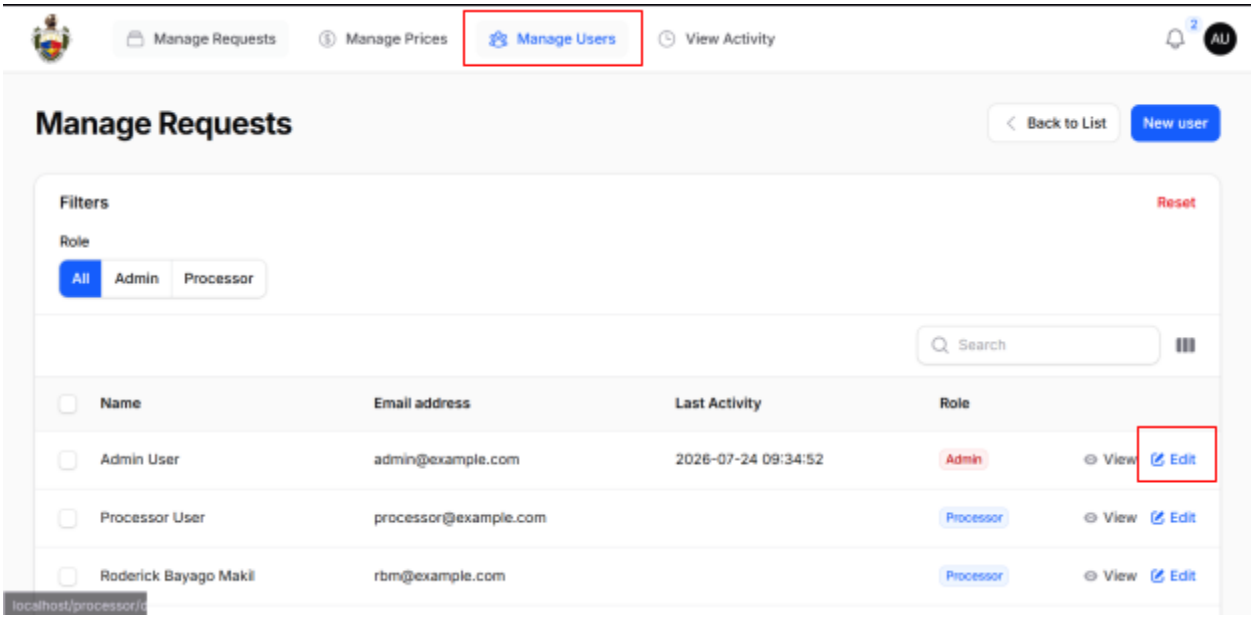

To add a user, click the Manage Users tab then the New User Button.

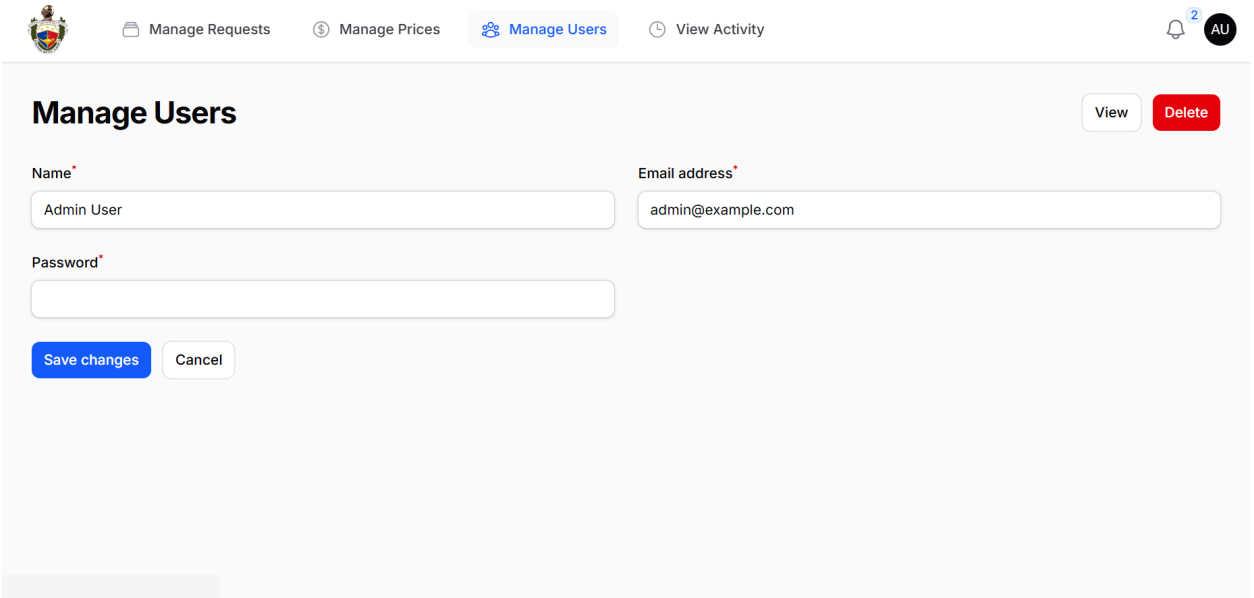

Fill out each field completely and correctly, then click Create to create an account. As of writing, an administrator can only create processor accounts for security purposes. If you would like to create an administrator account, please contact a developer to add it for you.

Forgetting/Editing a Password

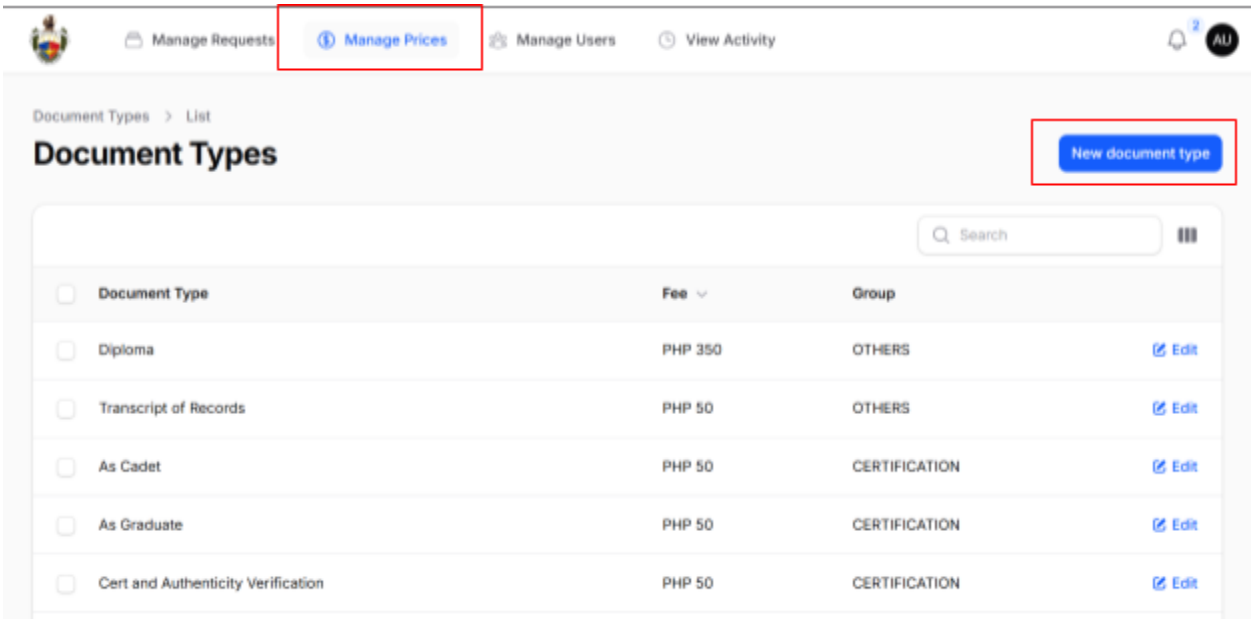

Click the Manage Users tab and then the Edit button on the row of the account you would like to change the password of.

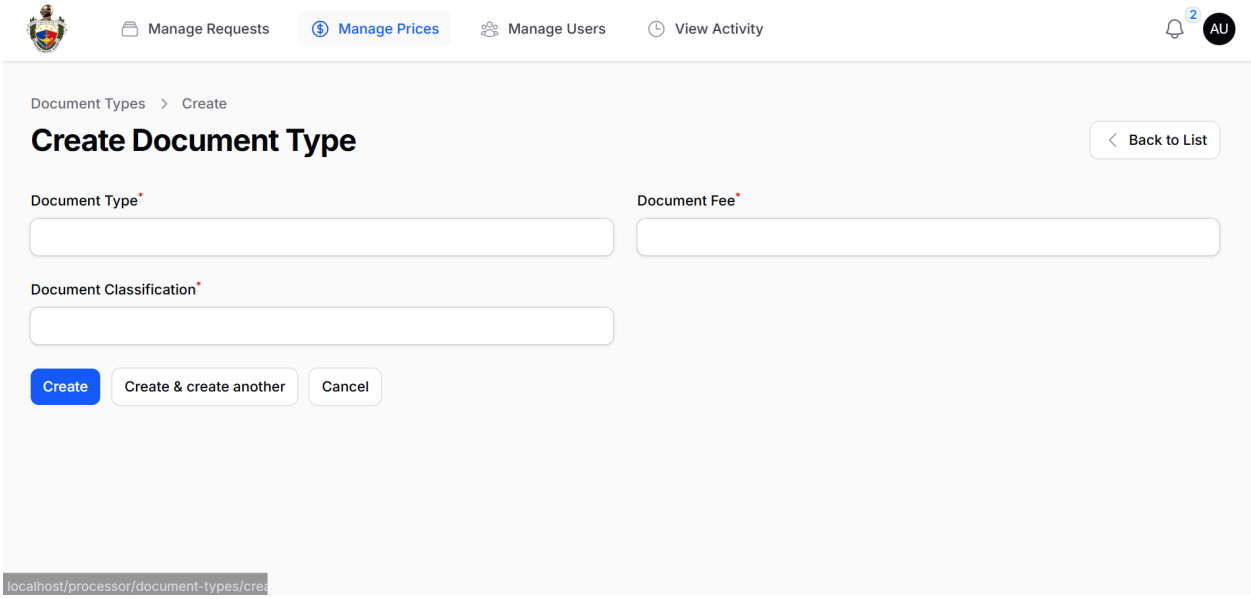

For security and privacy purposes, when editing a user's password the administrator must provide a new password, which will invalidate the previous password. As of writing, there is no

way to view a user's password. After editing any details or inputting a new password, click save changes.

Adding Documents to the Request List

To add new documents to the list that are requestable, click the Manage Prices tab and then the New Document Type button.

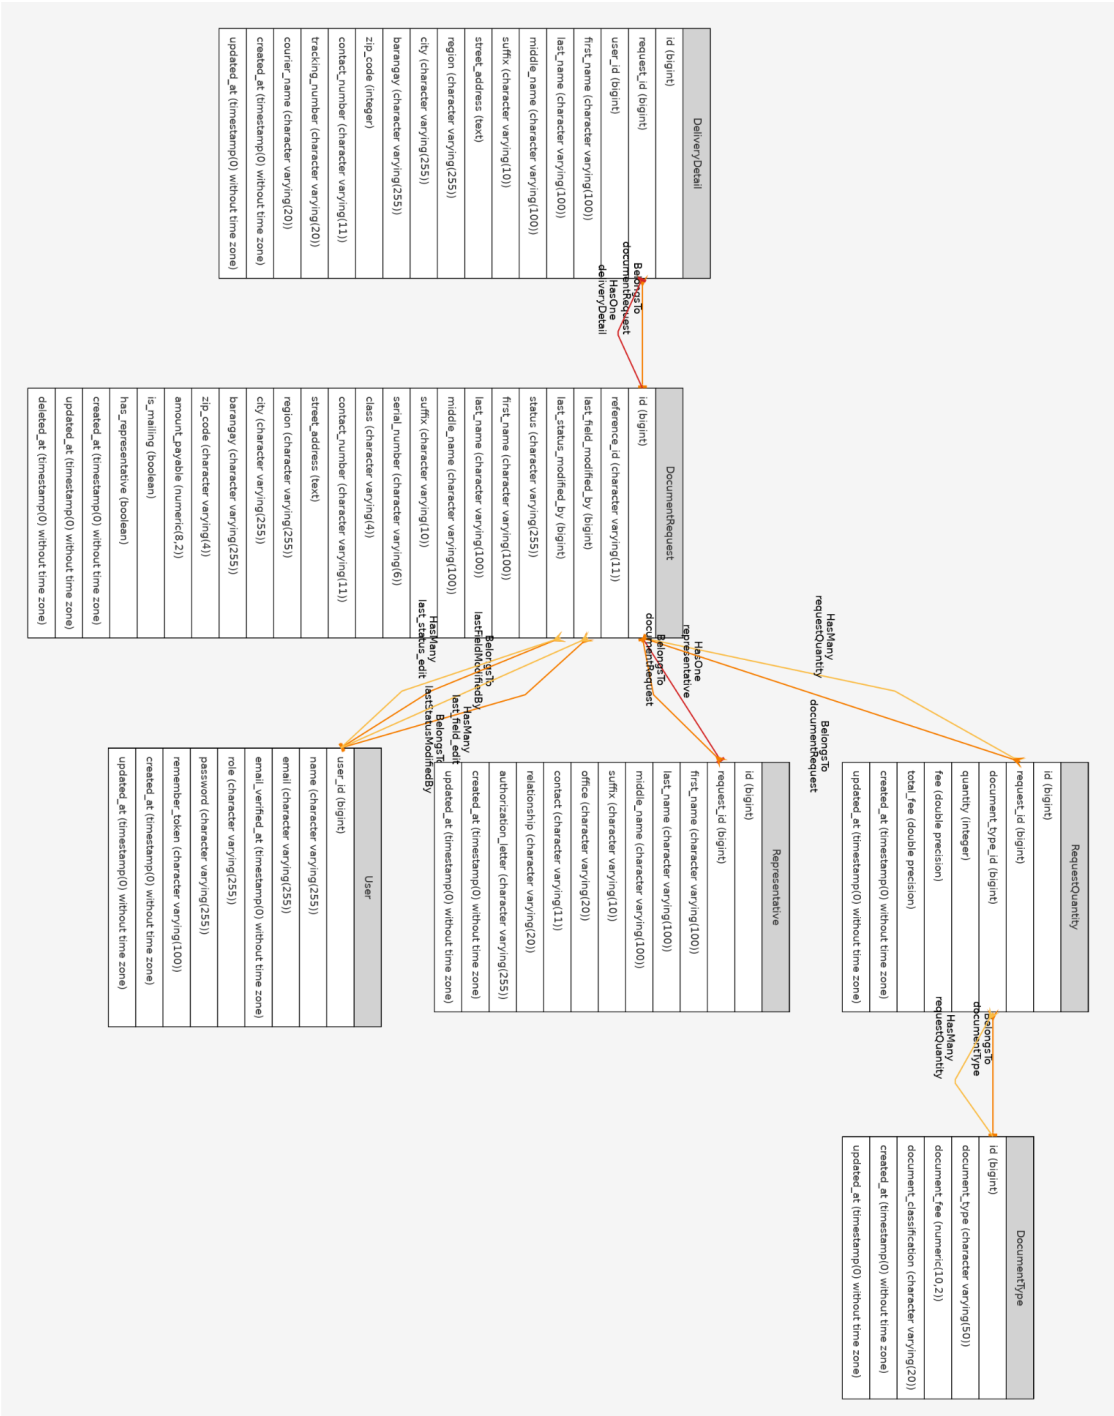

Fill out each field on the creation screen. Take note that the Document Classification field will determine the way the documents are grouped in guest kiosks, so you may use existing groups such as certification and others, or you can create a new one.

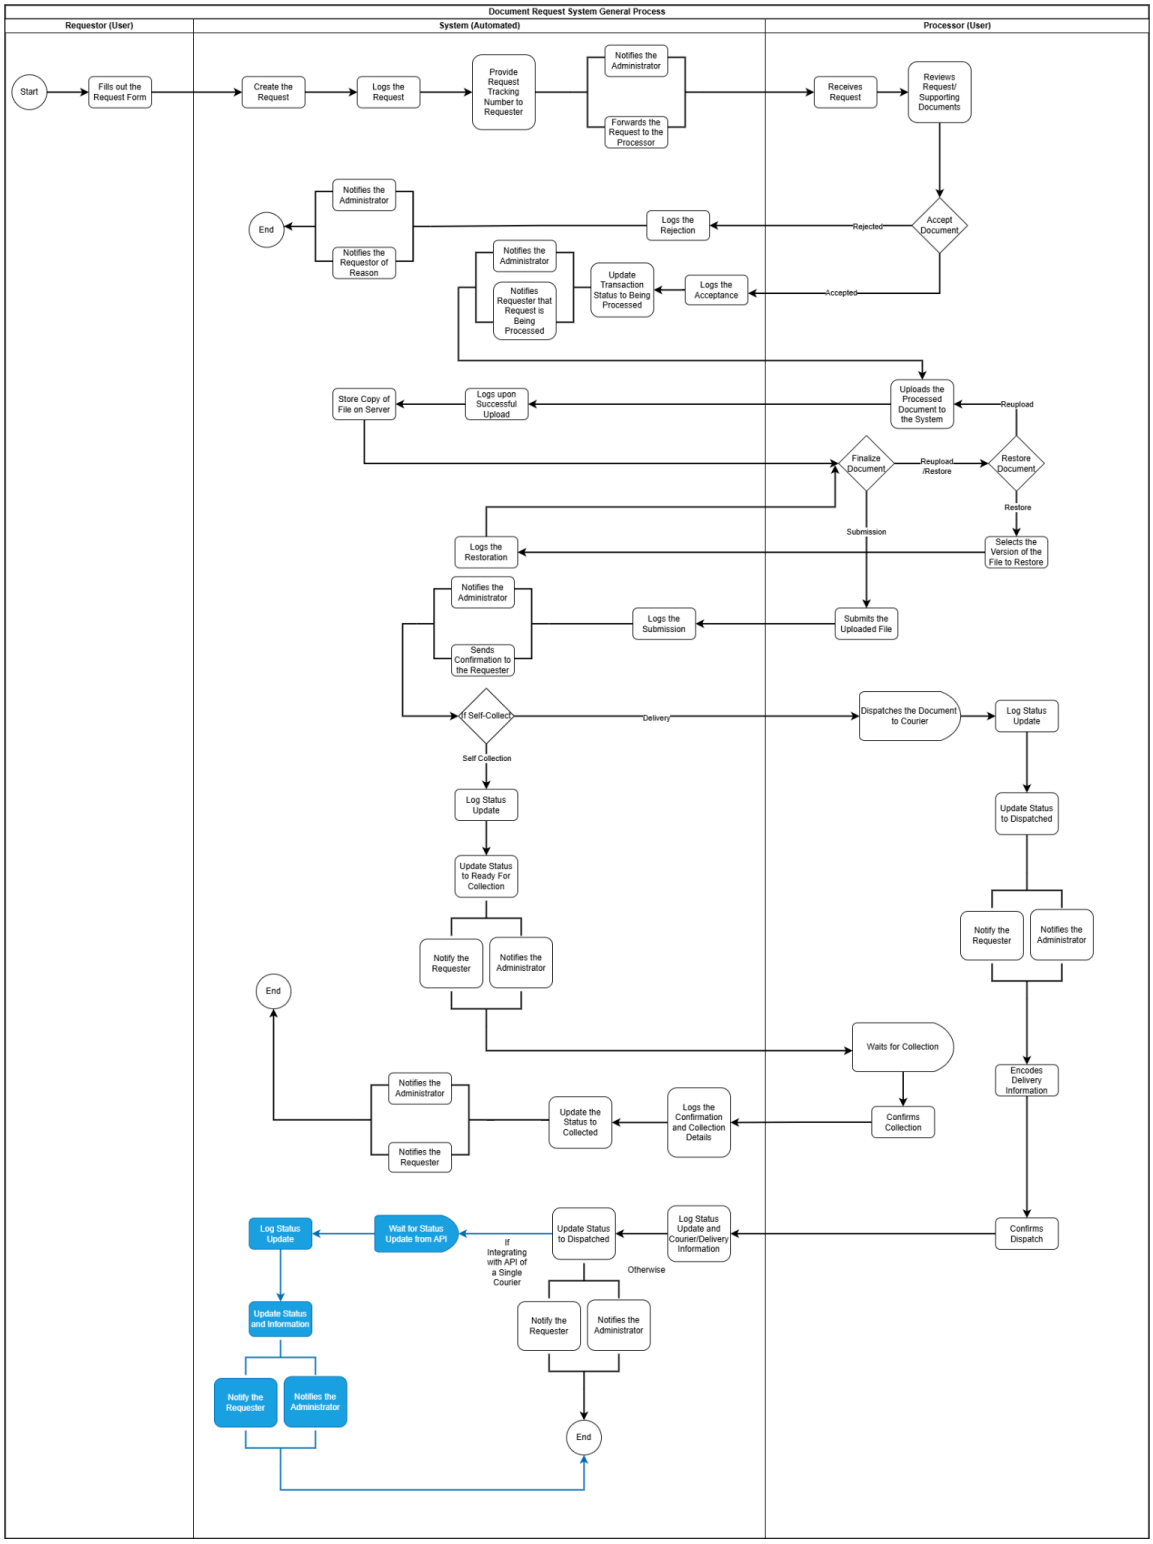

You may also edit existing documents by clicking the edit button of the row you would like to edit.

Business Rules

Setting Up the Server

This server setup guide assumes that you will be using a fresh install of Ubuntu Server.

First time Setup

```shell
sudo apt update && sudo apt upgrade -y
sudo apt install -y docker.io docker-compose-plugin ufw
sudo usermod -aG docker $USER
```

Logout after executing usermod.

```shell
sudo ufw allow OpenSSH
sudo ufw allow 80/tcp
sudo ufw allow 443/tcp
sudo ufw enable
docker run hello-world
```

Deployment

```shell
unzip production.zip -d production
cd production
```

Place the .env.prod into the folder after running cd production. Afterwards, run:

```shell
docker compose -f compose.prod.yaml --env-file .env.prod build
docker compose -f compose.prod.yaml --env-file .env.prod up -d
docker compose -f compose.prod.yaml --env-file .env.prod exec app php artisan migrate --force
docker compose -f compose.prod.yaml --env-file .env.prod ps
```

nginx, app, psql, and queue should show up if it's running. **BEFORE GOING LIVE, CHANGE THE FOLLOWING IN YOUR .env.prod, YOU MAY USE THESE COMMANDS TO GENERATE THEM OR PLACE YOUR OWN**

New APP_KEY:

```
Shell
docker compose -f compose.prod.yaml --env-file .env.prod exec app php artisan key:generate --show
```

Paste the result into APP_KEY=.

New DB_PASSWORD:

```
Shell
openssl rand -base64 24
```

Paste into DB_PASSWORD=.

APP_URL — set to the real domain/IP this will be reached at.

After changing any of these:

```
Shell
docker compose -f compose.prod.yaml --env-file .env.prod up -d --force-recreate app
```
